& TRANSPORTATION**

*Leader in the
production
of steam
generators for
cleaning and
sanitizing*

MECHANICAL INDUSTRIES

***MECHANICAL AND ELECTROMECHANICAL
INDUSTRY, INDUSTRIAL ENVIRONMENTS
IN GENERAL***

Cleaning and grease removal during machine maintenance and pre-treatment of individual metal parts can be done excellently with saturated dry steam technology.

COSMETICS & PHARMACEUTICALS

***MANUFACTURERS OF BEAUTY
AND HYGIENE PRODUCTS, SOAP FACTORIES***

Mixers, kettles and packaging systems become encrusted with processing residues, creating significant safety and hygiene problems. The concentrated force of the steam acts very precisely in hard-to-reach places.

- conditioners, filters and ventilation grilles
- cleaning transmission systems, oil sumps, motors and crankcases
- removal of grease and encrustation from floors, fixed structures and stairs

- cleaning of production lines and bottling plants
- remove deposits from conveyor belts and gears
- elimination of process waste
- sanitization of laboratories

TRANSPORTATION

**FIRMS SPECIALIZED IN CLEANING SHIPS,
PLANES, TRAINS AND BUSES**

Steam is indispensable for sanitizing and removing stains from the interior of motor vehicles, trains, planes and ships, eliminating odors and leaving the surfaces dry so that the vehicle can be used immediately. The vast range of accessories allows you

to adapt the steam generator to any space, so that the operator can use it in comfort while cleaning as fast as possible. Furthermore, the use of steam at a high temperature guarantees the complete elimination of ticks, fleas or lice in fabrics.

- elimination of smells
- sanitizing upholstery, seats and floors
- elimination of pathogens such as mites, bacteria and fungi
- cleaning of spots hard to reach

CAR WASH

menikini
dry steam technology

CAR WASHES & DETAIL SHOPS, AUTO DEALERSHIPS, FLEET & RENT A CAR COMPANIES, GAS STATIONS

With steam cleaning there are no dimensional limits. Steam is also far less abrasive than water jet or brush cleaning and therefore appropri-

ate for classic cars, deluxe limos, motorcycles, bikes and scooters without fear of damaging delicate parts.

Steam is a friendly, safe and easy technology that does not damage the paint.

By adjusting the distance between the gun nozzle and the surface to be treated, the applied temperature will always be safe for automotive paints, which withstands extreme heat and cold.

- cleaning of dashboard, windows, upholstery and carpets
- killing of pathogens such as mites, bacteria and fungi
- upholstery and carpets are dry and ready to use in a few seconds

- engines and undercarriage cleaning
- brighter shining polish
- no limits due to legal restrictions for traditional water intensive car washing systems

PEST CONTROL & SANIFICATION

***WORKPLACES,
PUBLIC AND PRIVATE TRANSPORT***

The use of dry steam guarantees the complete elimination of ticks, fleas or lice in fabrics. Cleaning beds with most vacuum cleaners will not remove dust mite allergens, but instead throw them into the air and increase their volatility.

The combination of vacuuming and dry steam with a high temperature shock will definitely be fatal to all kind of parasites. The absence of water and the reduced use of detergents are factors which help maintain the optimum sanitary conditions.

PROTECT ENVIRONMENTS AND PEOPLE FROM ALLERGIES AND PARASITES

Mites and acari cause several forms of allergic diseases, including hay fever, asthma and eczema. They are usually found in beds and on carpets. Periodic steam sanitization eliminates these troublesome pathogens.

Dry steam applied to fabric and carpets will virtually eliminate all bedbugs including the hard to kill eggs.

Ticks are brought home by pets and often infest trains and other public transportation. They are vectors of a number of serious diseases. Vapor penetrates into cracks where ticks can hide.

Fleas transmit serious diseases through their bite. Dry steam is the best tool to fight an infestation because the thermal shock kills them instantly without the use of insecticides.

OUR COMMITMENT TO SUSTAINABILITY

Water is one of the most precious resources for humanity and must not be wasted unnecessarily. The use of dry saturated steam drastically reduces water consumption in all cleaning activities. Menikini technology is an ecological in-

vestment because it achieves excellent cleaning and sanitizing results, saving up to 100 times on washing water, significantly contributing to its conservation.
